

Eastern European Dust Explosion-proof Distribution Box

Article Overview

Eastern European dust explosion-proof distribution boxes are available in certified ATEX and IECEx enclosures, made from stainless steel, aluminum, or polyester, suitable for hazardous zones 21 and 22.

Overview

Dust explosion-proof distribution boxes, also known as Ex terminal or junction boxes, are designed to safely house electrical systems in environments with combustible dust. These boxes prevent ignition from sparks, arcs, or high surface temperatures, ensuring compliance with ATEX 2014/34/EU and IECEx standards . They are widely used in industries such as food processing, agriculture, chemical production, and material handling .

Materials and Construction

- **Stainless Steel (AISI 304L & 316L):** Offers high corrosion resistance and durability, suitable for harsh industrial environments .
- **Aluminum:** Lightweight and robust, often used for wall-mounted or portable enclosures .
- **Glass-Reinforced Polyester (GRP):** Provides excellent insulation and chemical resistance, ideal for areas with moisture or corrosive dust . These enclosures are typically rated IP66, ensuring protection against dust ingress and water jets, and are designed with reinforced construction to withstand internal explosions
