

Electrical distribution box with iron plate core

Article Overview

An electrical distribution box with an iron plate core is a durable, high-strength enclosure designed to protect electrical components in residential, commercial, and industrial settings.

Construction and Materials

Iron distribution boxes are typically made from high-quality cold-rolled steel or iron plates, such as SPCC/DC01 grades, which provide high strength, anti-deformation capability, and impact resistance. The interior can support heavy electrical components, while the exterior withstands external forces and environmental stress . The boxes are often stamped and welded, ensuring a robust and long-lasting structure .

Surface Treatment and Protection

To enhance durability, iron distribution boxes undergo surface treatments such as electrostatic powder coating, baked enamel, or galvanization, which provide corrosion resistance, weatherproofing, and aesthetic appeal . Many models achieve IP54 or higher ratings, making them suitable for indoor and sheltered outdoor use, with some weatherproof versions designed to resist rain, dust, and sun exposure .
