

Enable Huijue Fiber Optic Switch Port

Article Overview

To enable fiber ports on a Huijue switch, you need to ensure the SFP module is recognized, configure the port settings, and activate the interface.

Step 1: Verify Hardware and SFP Modules

- Ensure the fiber optic SFP or SFP+ module is compatible with your Huijue switch. Use single-mode SFPs for single-mode fiber and multimode SFPs for multimode fiber.
- Check that the fiber patch cables are correctly connected (Tx to Rx and vice versa) and that the connectors match the SFP type (LC-LC, duplex).
- Confirm the switch detects the SFP module. Many switches provide a command like `show interface status` or `show module` to list recognized modules .

Step 2: Access the Switch CLI

- Connect your computer to the switch using an Ethernet port. Assign an IP address in the same subnet as the switch.
- Use a terminal client (e.g., PuTTY) to log in to the switch via SSH or console cable. Enter your administrator credentials.

Step 3: Configure the Fiber Port

- Enter configuration mode: `configure terminal` or equivalent.
- Select the fiber port you want to enable, e.g., `interface gi1/0/25` or `interface xe1/1/1` depending on the switch model.
- Enable the port: `no shutdown`. This activates the interface if it was administrativel...
