

Equipment for optical cable sheathing

Article Overview

Optical cable sheathing equipment includes extrusion lines, stranding machines, and sheathing systems designed to produce high-quality fiber optic cables for indoor, outdoor, and specialized applications.

Overview of Sheathing Equipment

Optical cable sheathing equipment is used to apply protective layers to fiber optic cables, ensuring durability, flexibility, and environmental resistance. The process typically involves extrusion of plastic materials such as PE, PVC, or LSOH over the fiber core, sometimes combined with armoring or strength members for mechanical protection. Sheathing equipment is essential for producing cables like loose tube, tight buffer, ADSS, and FTTH drop cables.

Key Types of Equipment

- **Cable Sheathing Extrusion Lines** These machines apply the outer jacket to the fiber cable. They can handle single or dual-layer sheaths, gel-filled or dry designs, and are capable of high-speed production with precise control over diameter and centricity.
- **Stranding and Twisting Machines** SZ stranders, single/double twist bunchers, and aramid yarn stranding devices twist fibers or strength members together before sheathing. This ensures low tension fluctuation, stable lay length, and consistent binding tension.
- **Fiber Coating and Coloring Machines** These machines apply protective coatings to individual fibers and color them for identification. Coatings can include polyethylene, nylon, or other polymers.
- **Cabling and Bunching Machines** These combine multiple fibers or subunits into a s...
