

European Building Cable Tray Installation

Article Overview

Cable tray installation in Europe follows BS EN 61537 standards, emphasizing safe, organized, and durable cable management using steel, stainless steel, or aluminum systems.

Standards and Compliance

European cable tray systems must comply with BS EN 61537, which governs the design, manufacture, and installation of cable support systems, including trays, ladders, and mesh trays . Channel support systems should follow BS 6946. Compliance ensures safety, structural integrity, and proper cable support without using trays as walkways or load-bearing surfaces .

Materials and Types

Cable trays are typically made from hot-dip galvanized steel, stainless steel, or aluminum, with various finishes to enhance corrosion resistance . Common types include:

- Ladder trays: Open design for ventilation and heat dissipation.
- Perforated trays: Allow airflow while providing partial protection.
- Solid-bottom trays: Used where aesthetics or protection from dust is important.
- Mesh trays: Lightweight, flexible, and suitable for complex routing .

Installation Guidelines

- Site Preparation: Inspect all materials for damage and verify against approved sh...
