

Explosion-proof switches for distribution boxes

Article Overview

Explosion-proof distribution boxes use specialized switches such as MCBs, disconnect switches, and safety switches designed to operate safely in hazardous environments with ATEX and IECEx certifications.

Types of Switches

1. Miniature Circuit Breakers (MCBs): MCBs are commonly used in explosion-proof distribution boxes for lighting, heating, and socket circuits. They provide overcurrent protection and are designed to operate reliably in hazardous zones like Zone 1, 2, 21, and 22 . 2. Disconnect and Safety Switches: These switches allow safe isolation of circuits for maintenance or emergency shutdown. Explosion-proof disconnect switches are available in fused and non-fused versions and are suitable for motor disconnects, industrial control, and service entrance applications . Safety switches are often enclosed in aluminum or stainless steel housings and can handle currents from 16 to 125 Amperes with power ratings up to 45 kW . 3. Push Buttons and Control Switches: Local control stations may include ATEX-certified push buttons, mushroom switches, and motor starters. These are used for operational control and monitoring within the distribution box and are often configurable to meet specific industrial requirements .

Materials and Enclosures

Explosion-proof switches are typically housed in stainless steel (AISI 304L/316L) or...
