

Fiber Distribution Box 24-Core Installation

Article Overview

A 24-core fiber distribution box can be installed indoors or outdoors, providing secure splicing, distribution, and protection for up to 24 fiber connections.

Preparation and Mounting

- **Select Location:** Position the box at a comfortable working height, typically 700mm to 1m above the floor for indoor installations, or in a weather-protected area for outdoor use . Ensure the wall or pole is sturdy enough to support the box.
- **Mark and Drill:** Use the box as a template to mark drill points. Drill holes and secure the box with screws or mounting brackets as per the manufacturer's instructions .
- **Cable Entry:** Open the designated knock-out ports or cable entry points. Fit grommets or oval port sleeves to protect cables from sharp edges . For outdoor boxes, ensure proper sealing to maintain IP55-IP68 protection .

Cable Management

- **Feeder Cable Preparation:** Strip the outer sheath of the feeder cable and secure it using the clamping support provided. Maintain a minimum bend radius of 40mm to prevent fiber damage .
- **Splice Tray Setup:** Install the splice trays inside the box. Most 24-core boxes accommodate 8-fiber trays, allowing unused fibers to be stored neatly .
- **Routing Drop Cables:** Route drop cables or pigtails through separate paths to avoid tangling. Use the hinged flap or flip-up distribution panel to facilitate easy access during splicing and maintenance
