

Fiber Distribution Box 4 Cores

Article Overview

A 4-core fiber distribution box is a compact, durable enclosure designed for terminating, splicing, and distributing up to four optical fibers in FTTH and FTTX networks.

Overview and Features

A 4-core fiber distribution box is a lightweight, wall-mountable or pole-mountable enclosure that provides a secure termination point for fiber optic cables. It supports fusion splicing, direct termination, and patching, and can house a PLC splitter with 1:2 or 1:4 splitting ratios for signal distribution . The box is typically made from ABS or ABS-PC materials, offering waterproof, dustproof, impact-resistant, and anti-aging properties, often rated IP65 for outdoor protection . Key features include:

- Compact design for easy installation in residential, commercial, or small business environments .
- Cable management with separate paths for feeder cables, drop cables, pigtails, and patch cords to prevent interference .
- Cassette-type SC adapter installation for organized and accessible connections .
- Flip-up distribution panel for convenient maintenance and splicing access .
- Versatile cable ports compatible with indoor FTTH drop cables and outdoor Figure-8 self-supporting cables .

Applications

- Residential buildings: Provides fiber connectivity to multiple households, supporting high-speed internet, TV, and phone services
