

Fiber Optic Cable Distribution Box Termination Process

Article Overview

The termination process in a fiber optic distribution box involves preparing the cable, routing fibers through guides, splicing to pigtails, and securing them in a splice tray to ensure organized, low-loss connections.

Overview of Fiber Termination Boxes

A Fiber Termination Box (FTB), also called a Fiber Distribution Box or Optical Termination Box (OTB), is a compact enclosure designed to organize, protect, and terminate fiber optic cables. It serves as a junction between incoming feeder cables and outgoing pigtails or patch cords, providing a secure interface for network connections. FTBs can be wall-mounted, rack-mounted, or outdoor weatherproof units, depending on the installation environment and network scale .

Step-by-Step Termination Process

- Pre-Installation Considerations
- Location: Choose an accessible, secure location for the FTB.
- Capacity Planning: Ensure the box can accommodate current and future fiber counts.
- Cable Preparation: Strip the outer jacket carefully, exposing the fibers without damaging them. Protect bare fibers immediately to prevent breakage .
- Mounting the Box
- Install the FTB on a wall, rack, or outdoor structure....
