

Fiber Optic Cable Inlet and Distribution Box

Article Overview

A fiber optic cable inlet distribution box is a protective and organizational enclosure used to terminate, splice, and distribute fiber optic cables in both indoor and outdoor networks.

Overview

A fiber optic distribution box (also called a fiber optic terminal or termination box) serves as a central point for managing fiber optic cables. It allows for cable termination, splicing, and distribution while protecting delicate fibers from physical damage, dust, and environmental factors. These boxes are essential in telecommunications, FTTH (fiber-to-the-home), and enterprise networks, providing a neat and organized solution for connecting multiple network devices or end-users .

Types of Distribution Boxes

- Wall-mounted boxes: Compact and suitable for indoor applications with limited space, often used in residential or small commercial settings .
- Rack-mounted boxes: Designed for 19-inch equipment racks in data centers or telecom rooms, allowing centralized management of multiple fiber connections .
- Outdoor/FTTH boxes: Weatherproof enclosures for wall or pole mounting, supporting last-mile connectivity with waterproof and dustproof designs .
- High-capacity industrial boxes: Support 1-24 fiber cores, suitable for large-scale deployments, with durable ABS+PC materials for mechanical protection
