

Fiber Optic Cable Opening Machine

Article Overview

A fiber optic cable opening machine is designed to separate and prepare fibers for further processing, ensuring high-quality, stress-free fiber handling in cable production.

Function and Purpose

A fiber optic cable opening machine is used to open, separate, and prepare fibers from bales or bundles before they are processed into cables. This step is crucial to ensure that fibers are evenly distributed, untangled, and free from mechanical stress, which preserves their optical performance and structural integrity during subsequent manufacturing stages ().

Key Features

- **Multi-stage Opening:** Machines like the OF-550 feature 4 independently motorized stages, each with specialized plates to ensure accurate fiber opening ().
- **Variable Speed Control:** Inverters and potentiometers allow precise speed adjustments for each stage, optimizing performance for different fiber types ().
- **Wide Fiber Compatibility:** Capable of processing polyester, natural fibers, microfibers, virgin or recycled fibers, and blends without mechanical adjustments ().
- **Stress-Free Processing:** Airflow and spiked discs open fibers without mechanical damage or overheating, maintaining fiber quality ().
- **Cooling Systems:** Integrated cooling prevents fiber overheating during high-speed operation ().
- **High Production Capacity:** Some machines operate at 250-300 kg/h, suitable for h...
