

Fiber Optic Cable Tight-Bundling Production Process

Overview

Optical cables are born from ultra-pure glass preforms, drawn into hair-thin fibers, coated for protection, bundled strategically, and encased in durable jackets. This meticulous process ensures light-speed data transmission with minimal loss. BM-Rosendahl is the global supplier of production equipment for lead-acid and lithium-ion batteries. The raw materials used in the initial stages of optical fibre manufacture include high quality synthetic quartz substrate tubes, ultra-pure halides such as silicon tetrachloride (SiCl_4) and germanium tetrachloride (GeCl_4), as well as the gaseous forms of pure oxygen (O_2), Helium (He). As SZ stranding defines the mechanical and environmental properties of your loose tube fiber optic cable, you need technology that you can rely on. The sheathing. To produce high-quality fiber optic cables efficiently and gently, Kurre Systems relies on pre-bundling the fibers using a state-of-the-art fibre bundle machine.
