

Fiber Optic Coupler Patch Cord

Article Overview

Fiber optic patch cord connection couplers are devices that join two fiber optic patch cables, enabling secure, low-loss optical signal transmission between connectors.

Function and Purpose

A fiber optic coupler (also called an adapter) is used to connect two fiber optic patch cords without splicing, allowing for easy installation, maintenance, and flexibility in optical networks . Couplers maintain precise alignment of the fiber cores to ensure minimal insertion loss and return loss, which are critical for maintaining signal quality .

Types of Couplers

Couplers are designed to match the connector types of the patch cords. Common types include:

- LC-LC Couplers: Small form factor, ideal for high-density applications in data centers .
- SC-SC Couplers: Square push-pull connectors, widely used in FTTH and enterprise networks .
- ST-ST Couplers: Bayonet-style connectors, often used in legacy or industrial networks .
- Hybrid Couplers: Connect different connector types, such as LC to SC, allowing flexibility in mixed environments . Couplers can be duplex (supporting two fibers for bidirectional communication) or simplex (single fiber) depending on network requir...
