

Fiber optic access router LAN

Article Overview

A fiber optic router LAN allows you to distribute high-speed fiber internet to multiple wired devices using the router's Ethernet ports, often supporting multi-gigabit speeds.

Connecting Fiber Optic Internet to a Router

To use fiber internet with your router, you typically need an Optical Network Terminal (ONT) provided by your ISP. The fiber optic cable from the wall outlet connects to the ONT, which converts the optical signal into an Ethernet signal. You then connect the ONT to your router's WAN port using an Ethernet cable. Some routers have SFP ports that allow direct fiber connections without an ONT, but this depends on the router model and ISP compatibility .

LAN Ports and Multi-Gig Support

Fiber routers often include multiple LAN ports for wired connections. Modern routers designed for fiber internet may feature:

- Gigabit LAN ports (1 Gbps) for standard wired devices.
- 10G LAN ports or LAN aggregation to combine multiple ports for higher throughput, supporting speeds up to 2 Gbps or more .
- Multiple ports to connect computers, NAS devices, gaming consoles, or switches for extended networks. Using wired LAN connections ensures low latency, stable speeds, and minimal interference, which is especially important for gaming, streaming, or large file transfers....
