

Fiber optic cable directly connected to the router

Article Overview

A standard fiber optic cable cannot connect directly to a typical home router; it must first pass through an Optical Network Terminal (ONT) or a fiber-ready router to convert the optical signal into an electrical signal.

Why Direct Connection Isn't Possible

Fiber optic cables transmit data as light signals, which standard routers cannot interpret directly. The Optical Network Terminal (ONT), usually provided by your ISP, serves as the conversion device, translating the optical signals into standard electrical signals that your router can use. Without this conversion, the router cannot process the incoming data.

Required Equipment

To set up a fiber connection, you typically need:

- Fiber Optic Cable: Provided by your ISP, usually with SC/APC or SC/UPC connectors .
- Optical Network Terminal (ONT): Converts light signals to electrical signals for your router .
- Router: Standard or fiber-ready, with a WAN or SFP port to connect to the ONT .
- Ethernet Cable (Cat5e or higher): Connects the ONT to the router's WAN port .
- Power Cables: For both the ONT and router....
