

Fiber optic cable route map in remote areas

Overview

Interactive map showing every cable your data touches — backbone nodes, landing stations, and submarine segments with real geographic coordinates. Launch real network measurements from probes worldwide. Compare theoretical estimates with actual RTT and hop-by-hop packet journeys. Explore the physical backbone of the internet with our interactive map of undersea fiber optic cables, peering exchange points, and more. Visualize the growth of global connectivity. Ask about ICT infrastructure, broadband data, or interact with the map. Show me range to terrestrial fiber nodes on the map?

Is the ITU building in Geneva Switzerland within 10 km of a fibre node?

Start measuring on the map to see calculations here. Telecommunications providers rely on these maps to optimize routing, reduce latency, and enhance redundancy. Analyzing fiber paths helps network engineers identify the most. DIA and SASE integrate to offer secure, consistent connectivity with proactive threat protection enabling seamless and scalable network modernization. Secure Customer Experience & Connectivity Provide secure, uninterrupted internet connectivity to all your locations and cloud resources with bundled. This page is designed to answer a simple question: what does the world internet cable map actually look like, and how do those connections work in real life?

Map 1 is the modern world internet cable map (today's backbone).
