

Fiber optic distribution frame quota per piece

Article Overview

A single high-density fiber optic distribution frame can support up to 4,320 LC or 2,880 SC connector ports, depending on the design and type of connectors used.

Capacity and Quota

The fiber optic distribution frame (ODF) serves as the central hub for fiber splicing, termination, patching, and cable management in telecom networks and data centers. The quota per piece typically refers to the number of fiber connections or ports a single frame can accommodate. For example, Corning's Centrix™ high-density system supports up to 4,320 LC ports or 2,880 SC ports per standard 7-ft (2200 mm) frame. This capacity allows for large-scale fiber management in central offices, headends, FTTx, and data center environments.

Factors Affecting Quota

- Frame Type:
 - Rack-mounted ODFs: High-density, modular, suitable for data centers.
 - Wall-mounted ODFs: Compact, lower capacity, ideal for smaller installations.
 - Floor-mounted ODFs: Can support very high fiber counts in telecom or industrial setups.
- Connector Type:
 - LC connectors: Smaller, allowing higher port density.
 - SC connectors: Larger, reducing the total number of ports per frame....
