

Fiber optic lc interface multimode

Article Overview

A multimode LC interface is a compact, high-density fiber optic connector designed for multimode fiber applications, widely used in data centers, LANs, and high-speed networking equipment.

Overview of LC Connectors

The LC (Lucent Connector) is a small form factor fiber optic connector featuring a 1.25 mm ferrule, which is half the size of the SC connector's 2.5 mm ferrule, allowing for higher port density in patch panels and network devices . LC connectors use a push-pull latch mechanism, similar to RJ45 connectors, providing secure and easy connections while maintaining precise fiber alignment . They conform to TIA/EIA-604 standards, ensuring cross-vendor compatibility and reliable optical performance .

Multimode Applications

Multimode LC connectors are specifically designed for multimode fiber (MMF), which typically has core diameters of 50 μm or 62.5 μm . They are commonly used in short-to medium-distance networks, such as data centers, enterprise LANs, and campus networks, where high-speed transmission (10G, 25G, 40G, 100G) is required . Multimode LC interfaces are compatible with SFP, SFP+, and QSFP modules, enabling seamless integration with optical transceivers .

Key Features

- Compact Size: Enables high-density deployment, doubling port density compared...
