

Fiber optic set-top box router screen mirroring

Article Overview

You can mirror your smartphone or tablet to a TV using a fiber optic set-top box by connecting the set-top box to the TV and ensuring both devices are on the same network.

Setting Up the Fiber Optic Connection

- **Connect the Fiber Optic Router:** Ensure your fiber optic router is powered on and connected to the fiber optic socket provided by your ISP. This router distributes internet and TV signals to your devices, including the set-top box and smart TV .
- **Connect the Set-Top Box:** Use a high-speed HDMI cable to connect the set-top box to your TV. Some setups may allow the set-top box to connect directly to the ONT (Optical Network Terminal), but most modern installations use the router to manage both internet and TV data .
- **Activate Services:** Turn on the TV and set-top box, select the correct HDMI input, and follow on-screen instructions to activate your TV service and connect to the internet .

Enabling Screen Mirroring

- **Use a Compatible App:** Many fiber optic providers, such as Jio Fiber, support screen mirroring through apps like JioTV Plus or built-in screencast features on the set-top box .
- **Connect Devices to the Same Network:** Ensure your smartphone, tablet, or computer is connected to the same Wi-Fi network as the fiber optic router. Screen mirroring relies on both devices being on the same local network
