

Fiber splicing tray on 12-core optical cable

Article Overview

A 12-core fiber splicing tray is designed to organize, protect, and manage splices for 12 individual optical fibers, ensuring secure routing and easy access for maintenance or expansion.

Purpose and Function

A 12-core fiber optic splice tray provides a dedicated space to store and protect fiber splices and excess fiber length. It allows technicians to loop incoming and outgoing fibers safely, preventing microbends or damage, and provides holders for fusion or mechanical splices. The tray can also accommodate pigtails, enabling connections to other fiber optic equipment or distribution frames .

Design and Materials

- **Material:** Most trays are made from durable ABS plastic or aluminum, offering protection in both indoor and outdoor environments .
- **Capacity:** Designed for 12 fibers, some trays also support 24 fibers or ribbon cables for flexible deployment .
- **Stackable and Compact:** Trays are often stackable within closures, cabinets, or ODFs, saving space while maintaining organized fiber routing .
- **Color Options:** Available in white, beige, or black to assist with fiber identification and network organization
