

Flooring Material Cable Tray

Article Overview

Floor cable trays provide safe, organized, and walkable routing for electrical and data cables in high-traffic areas, with options for interlocking ramps, walkable trunking, and heavy-duty troughs.

Types of Floor Cable Trays

1. **Interlocking Cable Ramps:** These are modular ramps that snap together to span sidewalks, plant floors, or roads. They feature multiple channels to separate different cables, a textured surface for traction, and are resistant to weather and abrasion. ADA-compliant versions provide gradual inclines suitable for wheelchairs and carts, and end caps are available for secure connections .

2. **Walkable Floor Trunking:** Designed for industrial environments, these are made of galvanised sheet steel with embossed covers for slip resistance (R10 according to DIN 51130). They can withstand footfall loads up to 2,000 N and allow flexible installation with variable connecting straps. Multiple cross-sections and optional perforated bases enable separation of power, control, data cables, and even fluid or compressed air lines .

3. **Cable Troughs:** Heavy-duty concrete or recycled composite troughs with solid, non-slip covers provide permanent or temporary cable routing. They are suitable for large-scale applications like stadiums, warehouses, airports, and railway projects. Covers can be quickly removed and re-fitted, and the system allows flexible cable entry points along the channel
