

Gas compartment explosion-proof distribution box

Article Overview

A gas compartment explosion-proof distribution box is a certified enclosure designed to safely contain electrical components in hazardous areas, preventing ignition of flammable gases or dust.

Overview

Explosion-proof distribution boxes are engineered to contain internal explosions and prevent flame propagation to the surrounding environment. They are commonly used in oil and gas facilities, chemical plants, mining operations, and other hazardous zones where flammable gases or combustible dust may be present. These boxes are designed according to international standards such as ATEX, IECEx, and China GB3836, ensuring compliance with safety regulations.

Key Features

- **Enclosure Types:** Flameproof (Ex d) and increased safety (Ex e) designs are standard, with some boxes also offering dust protection (Ex tb) for combustible dust environments.
- **Materials:** Commonly constructed from 304 or 316L stainless steel or Q235 steel, providing corrosion resistance, mechanical strength, and durability in extreme conditions.
- **Temperature Ratings:** Designed to operate safely across a wide range of temperatures, typically from -40°C to $+60^{\circ}\text{C}$, depending on the certification and zo...
