

German Distribution Box Size Indication

Article Overview

Distribution boxes in Germany must comply with DIN EN 60670-1 and VDE 0606-1, with physical sizing allowing for current load, future expansion, and ergonomic installation.

Standards and Compliance

In Germany, distribution boxes are governed by DIN EN 60670-1 and VDE 0606-1, which cover enclosures for electrical installation equipment with rated voltages up to 1000 V AC and 1500 V DC, suitable for indoor and outdoor use. For low-voltage installations, the VDE 0100 series specifies requirements for protection against electric shock (DIN VDE 0100-410), thermal effects (DIN VDE 0100-420), and testing (DIN VDE 0100-600). Compliance ensures safety for people and property and is legally required.

Electrical Dimensioning

The electrical sizing of a distribution box depends on:

- Maximum current load: The box must accommodate all circuits without exceeding rated current.
- Cable cross-sections: Must match the load and comply with VDE 0298-4 for admissible currents.
- Protection devices: Space for fuses, circuit breakers, and residual current devices (RCDs) must be included. A reserve of 20–30% is recommended for future expansions, such as additional circuits, photovoltaic systems, heat pumps, or smart...
