

High-efficiency optical cable delivery reel

Article Overview

High-efficiency optical cable reels are designed for rapid deployment, lightweight portability, and durable storage of fiber optic cables in demanding environments.

Modular Advanced Reel System (MARS)

The OCC MARS reel is a lightweight, modular system constructed from impact-modified polymer, making it significantly easier to transport than traditional metal reels . It is ideal for harsh-environment fiber optic installations where cables need to be deployed and retracted quickly. MARS offers a variety of deployment options, including A-frames, cable acquisition cradles, tripods, bumper mounts, and backpacks. Additional features include fiber optic cleaning kits, flip-out handles, built-in dividers, connector cradles, and stackable designs, providing flexibility for military, broadcast, or field communication applications .

Industrial Metal Reels

The BX-05 Portable Industrial Metal Fiber Optic Cable Reel is built with a durable metal frame for long service life and resistance to impact, dust, and moisture . It supports fiber optic cables ranging from 100 to 1500 meters and is suitable for field communications, emergency response, and outdoor fiber installations. Its ergonomic design, including smooth winding mechanisms, handles, and portability features, ensures efficient cable deployment and retrieval.
