

High-precision fiber optic distribution boxes for Ethiopian airports

Article Overview

High-precision fiber optic distribution boxes suitable for Ethiopian airports are available in both indoor and outdoor configurations, supporting up to 288 cores with robust environmental protection and modular designs for scalable network deployment.

Key Features and Specifications

Port Capacity and Modularity: Fiber optic distribution boxes in Ethiopia are available in a wide range of capacities, from 8-core to 288-core configurations, allowing airports to scale their network infrastructure according to traffic and connectivity needs. Common sizes include 1U (up to 24 ports) and 2U (up to 48 ports) for rack-mounted solutions, as well as wall-mounted and pole-mounted outdoor boxes.

Material and Durability: High-precision boxes are constructed from ABS, PC+ABS, or aluminum alloy with epoxy paint finishing, providing corrosion resistance, high mechanical strength, and flame retardancy. Outdoor models are designed to withstand rain, dust, and temperature variations, with operating ranges typically from -5°C to +40°C and humidity tolerance up to 85%.

Performance Metrics: These boxes ensure low insertion loss (≤ 0.2 dB), high return loss (≥ 45 dB PC, 60 dB APC), and high voltage protection (up to 3000V DC), which is critical for maintaining signal integrity in high-traffic airport networks. They also provide secure fiber management, including splice trays, adapter panels (FC, SC, LC), and buffer storage to prevent bending or stress on fibers.

Installation Flexibility: Distribution boxes support wall-mount, pole-mount, and cabinet installations, making them suitable for both termin...
