

High-speed optical fiber reel

Article Overview

High-speed optical fiber reels enable reliable, high-bandwidth data transmission for industrial automation, drones, and long-distance UAV applications, supporting speeds up to 400 Gbps and lengths up to 30 km.

Overview

High-speed optical fiber reels are specialized systems designed to transmit large volumes of data over optical fibers while allowing the cable to be wound and unwound efficiently. They are widely used in industrial automation, remote control systems, and unmanned aerial vehicles (UAVs) where low latency, high reliability, and immunity to electromagnetic interference (EMI) are critical .

Key Features

- **Data Transmission Speed:** Industrial motor-driven reels can support up to 400 Gbps using TFO (Transmitter Fiber Optics) technology with multiple single-mode or multi-mode fibers .
- **Fiber Lengths:** Reels for drones and UAVs can handle 5 km, 10 km, 20 km, and 30 km, with the ability to process even longer lengths for custom applications .
- **Low Latency & High Reliability:** Optical fiber reels provide ultra-low latency, stable signal transmission, and are resistant to interference from radio waves, radar, or military-grade electromagnetic sources .
- **Construction & Materials:** Reels may use aerospace-grade composites or lightweight modular polymer systems (e.g., OCC MARS®) for durability, portability, and ease of deployment in harsh environments
