

Household electrical distribution box thickness 150

Article Overview

A common household electrical distribution box with a 150 mm depth is typically a wall-mounted metal or plastic enclosure, often sized around 300×200×150 mm, suitable for standard residential circuits.

Standard Dimensions and Thickness

For household use, wall-mounted distribution boxes often come in standardized size families. A depth of 150 mm is common, with typical external dimensions such as 300×300×150 mm or 300×200×150 mm depending on the manufacturer and internal layout requirements. The depth ensures sufficient space for wiring, circuit breakers, and future expansion while maintaining safe spacing for electrical components.

Material and Protection

Distribution boxes can be made of metal or durable plastic. Metal boxes often provide better mechanical strength and are suitable for indoor or outdoor installations when combined with an IP65 rating, which protects against dust and low-pressure water jets. Plastic boxes are lighter and easier to install but may have lower impact resistance.
