

How is armored optical cable represented

Overview

An armored optical cable is a special optical cable with a protective stainless steel armor tube wrapped around the fiber core. The metal armor layer effectively protects the fiber core from animal biting, moisture corrosion and various external damages. Armored cables appear stronger, non-armored cables are cheaper. The wrong choice can: Or simply make installation impossible in your environment. But when it comes to protecting your fiber optic network from rodents, construction damage, and harsh weather, the difference between these two cable types can mean the difference. The Structure Diagram of an Armored Optical Cable illustrates how modern armoured fiber patch cords and outdoor fiber cables are engineered to survive mechanical stress, harsh installation conditions, and long-term field deployment.
