

How much does a single splice closure cost for a fiber optic cable

Article Overview

A fiber optic splice closure typically costs between \$80 and \$300 per unit, with total project costs varying based on fiber count, labor, and testing requirements.

Material Costs

The price of a single fiber optic splice closure depends on its type and capacity. Inline closures can range from \$80 to \$300, while dome closures for buried applications, wall-mount enclosures, and aerial splice cases have different price points. The cost increases with higher fiber counts or specialized designs, such as ribbon fiber closures requiring mass fusion splicing equipment.

Labor and Installation

Labor for splicing fibers into a closure is usually charged per splice, ranging from \$50 to \$150 per fusion splice point depending on project size, site conditions, and fiber type. For small projects, contractors may quote a flat price for the entire job. Typical labor for a single closure installation can take 2-6 hours for straightforward access, with more complex scenarios requiring 8-20 hours or more. Travel, mobilization, and safety requirements can further increase costs.

Testing and Documentation

Testing, such as OTDR verification, may be included in the per-splice rate or billed s...
