

How much does it cost to install photovoltaic modules

Article Overview

Current photovoltaic module prices range from approximately €0.25 per watt to €150 per kWp, depending on technology and module type.

Current Price Overview

As of 2026, monocrystalline PV modules, particularly glass-glass or bifacial types, are the most common and cost-effective options. Prices for these modules are generally around €150 per kilowatt-peak (kWp) for glass-glass modules, while high-performance modules with over 400 Wp can cost €100 to €200 per piece . For a typical 10 kWp residential system, the module costs alone would be roughly €2,000 to €2,500 . Lower-cost modules, such as standard monocrystalline glass-film types, may be available at €0.25 per watt, translating to about €90–110 for a 420 W module . Prices for polycrystalline or thin-film modules are generally higher or less common in 2026.

Factors Affecting Module Prices

- **Technology Type:** Monocrystalline modules are cheaper and more efficient than polycrystalline or thin-film modules. Bifacial and glass-glass modules offer higher durability and energy yield but can be slightly more expensive .
- **Manufacturer and Origin:** Non-Chinese manufacturers often charge more but may provide specialized formats, higher efficiency under low light, or longer warranties .
- **Market Trends:** Prices have been influenced by technological advancements, mass production, and global overcapacity, though geopolitical factors and raw material c...
