

How much does it cost to replace a photovoltaic inverter module

Article Overview

Replacing a solar PV inverter typically costs between \$300 and \$9,500, depending on inverter type, size, and installation requirements.

Cost Overview

The price of replacing a photovoltaic inverter varies widely based on the type and capacity of the inverter. Small inverters for systems of 0.1–3 kW generally cost \$300–\$1,000, while larger string or central inverters for bigger systems can range from \$1,000 to \$5,000. High-end or advanced inverters with features like monitoring, hybrid battery integration, or high efficiency can cost up to \$9,500 including installation. Microinverters, which are installed behind individual panels, are more modular and allow each panel to operate independently. These typically cost \$400–\$2,000 per unit, and for a system with multiple panels, total replacement costs can exceed \$50,000 in some cases.

Factors Affecting Cost

- Inverter Type: String inverters are generally cheaper, while microinverters and hybrid inverters are more expensive due to modularity and advanced features.
- System Size and Capacity: Larger systems require higher-capacity inverters, increasing the cost.
- Installation Complexity: Labor costs vary depending on inverter location, wiring, and system complexity.
- Efficiency and Features: Inverters with higher conversion efficiency (97–99%) or in...
