

How to arrange the circuits of the distribution box

Article Overview

Arrange circuits in a distribution box from left to right, with proper breaker sizing, wire color coding, and clear labeling to ensure safety and maintainability.

Circuit Arrangement

- **Breaker Placement:** Place circuit breakers from left to right, reserving positions on the right side for future expansion or spare circuits .
- **Main Switch and RCD:** Install the main isolator at the top or leftmost position to control all power, and place Residual Current Devices (RCDs) separately for easier fault detection .
- **Branch Circuits:** Group circuits logically, such as lighting, sockets, and heavy appliances, to balance the load across phases .

Wiring Guidelines

- **Wire Color Coding:** Use standard colors—blue for neutral, yellow for phase A, green for phase B, and red for phase C .
- **Wire Sizing:** Select wire sizes according to load; typically, 2.5mm² for lighting and sockets, 2.5–4.0mm² for air conditioning or high-power circuits .
- **Connection Method:** Connect each breaker to the incoming line or use parallel connections to simplify wiring .
- **Wiring Direction:** Route wires from the main breaker to branch breakers on the left, and outgoing wires to the right for distribution
