

How to check router and fiber optic connections

Article Overview

To check a fiber optic connection to your router, inspect the physical connections, verify ONT and router status lights, and optionally use a fiber optic power meter or signal tester.

Step 1: Inspect Physical Connections

Ensure that the fiber optic cable is securely connected at both ends—into the wall outlet and the Optical Network Terminal (ONT), and from the ONT to your router via Ethernet. Look for any visible damage such as cuts, bends, or kinks in the fiber cable, as these can cause signal loss or connection issues. Remove any dust caps and make sure connectors are clean and properly seated.

Step 2: Check ONT and Router Status Lights

The ONT converts the optical signal into an electrical signal for your router. Power, link, and data lights on the ONT should be solid or blinking green, indicating a healthy connection. Similarly, the router's WAN or Internet light should indicate an active connection. If lights are off or red, the connection may be faulty or the ONT may not be receiving a signal.

Step 3: Test Signal Strength (Optional)

For a more precise check, use a fiber optic power meter or Optical Loss Test Set (OL...
