

How to configure a router to connect to fiber optic internet

Article Overview

To configure a router for fiber optic internet, connect it to the Optical Network Terminal (ONT), enter your ISP credentials, update firmware, and optimize Wi-Fi settings for secure, high-speed connectivity.

Required Equipment

- Optical Network Terminal (ONT): Converts fiber optic signals into Ethernet for your router .
- Compatible Router: Ensure it supports fiber input, ideally with a WAN or SFP port labeled for fiber or ONT .
- Fiber Optic Cable: Typically a thin yellow cable with SC/APC or SC/UPC connectors .
- Ethernet Cable: Connects the ONT to the router's WAN port .

Step-by-Step Configuration

- Install the ONT: Connect the fiber optic cable from the wall outlet to the ONT and power it on. Wait for the status lights to stabilize (usually 2-5 minutes), .
- Connect Router to ONT: Use an Ethernet cable to link the ONT's LAN port to the router's WAN port . Power on the router and wait for indicator lights to confirm connectivity.
- Access Router Settings: Open a web browser and enter the router's IP address (commonly 192.168.1.1) to access the admin panel .
- Enter ISP Credentials: Input the username and password provided by your ISP if required
