

How to connect a fiber optic distribution box to a switch

Article Overview

To connect a fiber optic switch to a distribution box, route the fiber cables from the switch into the distribution box, secure them, and terminate or patch them to the adapter panel while maintaining proper bend radius and cable management.

Step 1: Prepare the Distribution Box

Install the fiber optic distribution box on a rack, wall, or pole depending on your setup. Use brackets and screws to secure it in place, ensuring the box is level and accessible for maintenance. Determine the installation direction to allow easy access to the front panel and adapters.

Step 2: Introduce Fiber Cables

Route the fiber optic cables from the switch into the distribution box through the designated cable inlet. Use grommets or cable entry guides to protect the fibers and prevent sharp bends. If using pre-terminated branch fiber jumpers or pigtails, ensure the cable length is sufficient to allow the front panel to be fully extended without tension.

Step 3: Terminate or Patch Fibers

Inside the distribution box, connect each fiber to the corresponding port on the adapter panel. This can be done using...
