

How to connect the 18-port access switch

Article Overview

To connect an 18-port access switch, mount it securely, connect power and network devices, optionally configure IP and VLAN settings, and ensure proper grounding and PoE setup.

Physical Installation

- Mount the switch: Place the switch in a rack, cabinet, on a wall, under a table, or on a horizontal surface, ensuring stability and ventilation .
- Ground the switch: Use a grounding cable sized according to local regulations. Attach the cable to the ground-screw opening with a terminal lug and secure it with a screw before powering on .
- Connect power: Plug the AC/DC adapter into the switch and a properly grounded outlet. Some switches can also be powered via PoE PD on a designated port .

Network Connections

- Connect devices: Use Ethernet cables to connect PCs, printers, or other network devices to the switch ports. For PoE devices, ensure the port supports PoE and the total power budget is sufficient .
- Inter-switch connections: Use a designated uplink port or SFP transceiver to connect to another switch or router. Configure trunk ports if VLANs are used .
- Verify link: Check the LED indicators for active links and data transmission. Ports 1-16 may support PoE and different speeds depending on the model .

Optional Configuration (Managed Switches)

- Access the switch: Connect via console cable, SSH, or web interface.
- Assign IP address: Set an IP address for management purposes....
