

How to connect the fiber optic cable splitter connector

Article Overview

To connect a fiber optic cable splitter connector, carefully clean, align, and secure the fiber ends to the splitter ports, ensuring minimal signal loss and proper orientation.

Step-by-Step Guide

1. Identify Splitter Type and Ports Determine whether your splitter is a PLC (Planar Lightwave Circuit) or FBT (Fused Biconical Taper) type and note the input and output ports. The input port is usually marked "IN," while outputs are labeled numerically or with "OUT" (SC, LC, or APC connectors) . 2. Prepare the Fiber Cables

- Strip approximately 5mm of the fiber jacket using a fiber optic stripper.
- Clean the exposed fiber with alcohol wipes or a fiber cleaning pen to remove dust and debris .
- Ensure the fiber ends are cut evenly and free of scratches to prevent signal loss. 3. Connect the Fibers
- For pre-terminated splitters with connectors, insert the fiber connector into the corresponding splitter port. Use a fiber optic adapter if needed to secure the connection .
- For bare or unconnectorized splitters, perform fusion splicing or mechanical splicing: align the fiber cores, fuse them using a splicer, and protect the splice with a splice protector .
- Avoid bending the fiber sharply; maintain a bend radius greater than 5cm to prevent damage . 4. Secure the Splitter...
