

How to connect the fiber optic cables to the router

Article Overview

Fiber optic cables connect to a router through an Optical Network Terminal (ONT), which converts light signals into electrical signals for your router.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts fiber optic signals into Ethernet-compatible signals .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors .
- Fiber-ready router: Ensure it has a WAN or SFP port compatible with the ONT .
- Ethernet cable (Cat6a or higher): Connects the ONT to the router .
- Power adapters: For both the ONT and router .

Step-by-Step Connection

- Install the ONT
- Locate the fiber wall outlet where your ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector by its plastic housing to avoid contamination or damage .
- Power on the ONT and wait for the status lights to stabilize, usually 2-5 minutes .
- Connect the ONT to the Router
- Use an Ethernet cable to link the ONT's LAN/Ethernet port to the router's WAN port .
- Power on the router and wait for the indicator lights to confirm a successful connection
