

How to determine if the fiber optic cable is plugged into the router

Article Overview

You can verify a fiber optic cable connection to a router by inspecting physical connections, checking router status lights, and using testing tools like a visual fault locator, power meter, or OTDR.

Step 1: Inspect Physical Connections

Ensure the fiber optic cable is securely plugged into both the router's SFP or WAN port and the Optical Network Terminal (ONT) provided by your ISP. Loose or improperly seated connectors can prevent a proper connection. Look for any visible damage, bends, or breaks in the cable, as these can cause signal loss or failure .

Step 2: Check Router and ONT Status Lights

Power on the ONT and router. Most devices have indicator LEDs that show connection status:

- A solid or blinking light on the fiber port usually indicates a successful link.
- If the light is off or red, the connection may be faulty or inactive .

Step 3: Use a Visual Fault Locator (VFL)

A VFL is a small device that emits visible red light through the fiber. Connect one end of the fiber to the VFL and observe the other end:...
