

How to disconnect the fiber optic cable from the router

Article Overview

To safely remove a fiber optic cable from a router, power down the device, identify the connector type, release the locking mechanism, and pull the connector straight out while protecting the fiber tip.

Step-by-Step Instructions

1. Power Down the Router Unplug the router or optical network terminal (ONT) from its electrical source to eliminate the risk of exposure to infrared laser light and protect internal components from damage . 2. Prepare the Workspace Ensure the area around the router is clean and free of dust or debris, as even microscopic particles can damage the fiber tip . Stabilize the router with one hand to prevent it from shifting during removal . 3. Identify the Connector Type Common residential fiber connectors include SC (square, push-pull), LC (smaller, clip or latch), ST, and FC types . Knowing the connector type helps you engage the correct release mechanism and avoid damage. 4. Release the Locking Mechanism

- SC connector: Depress the small plastic tab on top of the connector housing until the lock disengages .
- LC connector: Squeeze the plastic clip inward toward the connector body . Do not pull the cable before the lock is fully released. 5. Remove the Cable Grasp the connector body, not the thin cable jacket, and pull straight out along the axis of the connector. Avoid twisting, bending, or applying lateral force, which can damage the glass fiber . If resistance is felt, check the locking mechanism again before applying...
