

How to enable UPnP on a China Unicom fiber optic router

Overview

Quick Answer: To enable UPnP, access your router's web interface via its default gateway IP, navigate to the Advanced or Security settings, locate the UPnP option, and toggle it to "Enabled."

How to configure my China Unicom router (UPNP/NAT)

Hello all, I live in China and I'm on China Unicom. For my PC/phone, I usually connect them with Astrill. I never had any troubles playing on my Series X, even online, although I have some lag. Don't wait any longer and get started! If you've purchased a ZTE router from China Unicom and need to configure it to connect to the Internet, don't. To enable UPnP on your router, the first step is to log in to the router's web interface. This process can also be followed to disable the UPnP. On a TP-Link router, you can enable or disable UPnP by going to Advanced > Port Forwarding > UPnP in the web management page.
