

How to fuse an FC interface into an SC interface

Article Overview

You can connect an FC interface to an SC interface using a hybrid FC-to-SC fiber optic adapter, which allows seamless optical signal transmission between the two connector types.

Using FC-to-SC Adapters

The most straightforward method to fuse an FC interface into an SC interface is by using a hybrid fiber optic adapter. These adapters are designed to connect FC-type connectors to SC-type connectors without modifying the existing fiber cables . Key points include:

- **Connector Types:** Adapters are available in various combinations, such as FC (male/female) to SC (male/female), depending on your cable ends .
- **Single-mode or Multi-mode:** Ensure the adapter matches the fiber type (single-mode SM 9/125 μm or multi-mode MM OM1/OM2) to minimize signal loss .
- **Insertion Loss:** High-quality adapters typically have low insertion loss (0.04–0.2 dB) and high return loss (>50 dB), preserving signal integrity .
- **Durability:** Many adapters are rated for thousands of mating cycles and operate across wide temperature ranges (-40°C to $+70^{\circ}\text{C}$), making them suitable for patch panels, ODFs, and network equipment .

Installation Considerations

- **Identify Connector Gender:** Determine whether your FC and SC connectors are ma...
