

How to install the cover plate of the cable tray

Article Overview

Installing a cable tray cover involves precise measurement, proper alignment, and securing the cover using bolts, clips, welding, or magnets depending on the tray type and cover material.

Preparation

- Measure the Tray and Cover: Accurately measure the dimensions of the cable tray to ensure the cover fits perfectly. This prevents gaps or overhangs that could compromise safety or durability .
- Inspect Materials: Verify that both the tray and cover are made of high-quality, durable materials suitable for the environment and load requirements .
- Plan the Route: Ensure the cable tray is properly mounted and aligned along walls, ceilings, or floors before installing the cover. Use a laser level for straight alignment .

Securing Methods

- Bolt Method:
 - Drill holes in the tray side rails or flange.
 - Insert bolts through the cover and secure with nuts, ensuring alignment.
 - Torque bolts to the recommended specification (e.g., 1/4" or 3/8" hardware as per tray type), .
 - This method allows easy adjustments and provides strong, reliable attachment .
- Clip Method:
 - Attach clips to the tray and snap the cover into place....
