

How to install the fiber optic tray

1075KWHH ESS

Article Overview

Installing fiber optic trays involves careful preparation, precise cable handling, secure mounting, and organized splicing to ensure optimal network performance.

Preparation and Planning

Before installation, gather all necessary tools and materials, including fiber optic strippers, cleavers, fusion splicers, heat shrink sleeves, cleaning kits, safety glasses, and labeling materials. Ensure the work area is well-lit and clean to prevent contamination of fiber ends, which can cause signal loss. Plan the tray layout according to the network design, considering future expansions and the routing of fiber cables through ducts, risers, or trays .

Mounting the Fiber Tray

- **Positioning:** Place the tray in the designated rack, cabinet, or enclosure. Ensure it is level and properly aligned with other trays or components.
- **Securing:** Use the provided fasteners, brackets, or couplers to attach the tray. Finger-tighten screws initially to align all runs, then fully tighten to secure the tray. Verify that all horizontal and vertical runs are straight and adequately supported .
- **End Caps and Covers:** Install end caps or covers to protect the tray edges and prevent accidental fiber damage. Ensure brackets are positioned correctly on the outside of the tray sides .

Cable Preparation and Handling

- **Stripping and Buffer Tube Removal:** Carefully strip the outer jacket of the fiber optic cable and remove buffer tubes to access individual fibers, avoiding microbends or b...
