

How to install the sealing strip of the junction box

Article Overview

Proper installation of a junction box sealing strip ensures a watertight and dustproof seal, protecting electrical connections from moisture and environmental damage.

Step 1: Prepare the Junction Box

Before installing the sealing strip, clean the surface of the junction box thoroughly to remove dust, dirt, or debris. A clean surface ensures the gasket or sealing strip adheres properly and forms a tight seal between the box and its cover .

Step 2: Position the Sealing Strip

Place the rubber or silicone sealing strip along the edge of the junction box where the cover will sit. Ensure the strip is in close contact with the box surface and follows the contour of the box without gaps or twists . For waterproof rings, make sure they are seated evenly in their designated grooves.

Step 3: Apply Sealant (Optional)

If your junction box requires additional waterproofing, apply a thin, even layer of adhesive or silicone sealant along the joint between the box and the cover. Avoid bubbles or uneven application, as this can compromise the seal .

Step 4: Attach the Box Cover...
