

How to locate the factory s electrical distribution box

Article Overview

The factory's electrical distribution box is typically located in an electrical room, basement, or a designated hallway near the main power entry point.

Understanding the Distribution Box

A distribution box (DB box), also called a distribution board or panel, is the central hub that receives electricity from the main supply or transformer and distributes it to various circuits throughout the factory . It houses circuit breakers, fuses, bus bars, and protective devices to prevent overloads, short circuits, and electrical hazards . In industrial settings, it ensures stable operation of high-power equipment and allows sections of the system to be isolated for maintenance without shutting down the entire facility .

Typical Placement in a Factory

- **Electrical Room:** Most factories have a dedicated electrical room where the main distribution box is installed. This room is often near the main transformer or power entry point .
- **Basement or Utility Area:** In multi-level factories, the DB box may be located in the basement or a utility area to centralize power distribution.
- **Hallways or Accessible Panels:** Some distribution boxes are mounted on walls in hallways or near machinery for easier access during maintenance or emergencies
