

How to modify the fiber optic cable of a router

Article Overview

A fiber optic cable cannot be modified into a router because it is a transmission medium, not a network device.

Why a Fiber Optic Cable Cannot Become a Router

Fiber optic cables are designed to carry data as pulses of light through glass or plastic strands, whereas routers are electronic devices that manage network traffic, assign IP addresses, and provide routing, firewall, and Wi-Fi functions . The cable itself has no processing capability, memory, or software to perform these tasks. Attempting to convert a passive cable into an active routing device is technically impossible.

How Fiber Internet Connects to a Router

To use fiber internet at home, the fiber line typically terminates at an Optical Network Terminal (ONT) or Optical Network Unit (ONU) provided by your ISP . The ONT performs optoelectronic conversion, translating the light signals from the fiber into standard electrical signals (Ethernet) that a router can understand. After this conversion, a standard router can manage your home network, assign IP addresses, and provide Wi-Fi connectivity .

Alternative Solutions

- Router-ONU Combo: Some ISPs provide a single device that combines the ONT an...
