

How to restart a Huawei core switch

Overview

So at first login your switch and run the reset saved-configuration command to Erase the configuration file for the next startup and then restart the device. If you are prompted to save the configuration, select N indicating that the device will not save the current. To make sure the specified system software and files take effect, restart the device after system startup configuration is complete. Restart the device immediately after configuration: The device restarts immediately after the reboot. Huawei supports two main reset commands, depending on platform and software version. In both cases, the switch will ask for confirmation.) can be done in different ways. If you need to make a factory reset of the Huawei device you have several options whether you still have access to the CLI or not. For example: Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc.
