

How to turn off the electrical box distribution box

Article Overview

To turn off your main electrical distribution box, locate the main breaker in your panel and flip it to the “OFF” position while following safety precautions.

Step-by-Step Instructions

- **Locate the Breaker Box:** The main electrical panel, also called a breaker box or fuse box, is usually found in a basement, garage, utility room, hallway closet, or sometimes on an exterior wall of your home .
- **Open the Panel Door:** Carefully open the metal cabinet to access the breakers. Ensure the area is dry and free from water hazards .
- **Identify the Main Breaker:** Look for the largest switch, often labeled “Main” or colored differently (sometimes red). It is usually positioned at the top or side of the panel and controls all smaller breakers .
- **Turn Off the Main Breaker:** Firmly push the main breaker switch to the “OFF” position. This will cut power to the entire house .
- **Confirm Power is Off:** Use a non-contact voltage tester at outlets or light fixtures in different areas of your home to ensure electricity is completely off .

Safety Precautions

- **Never touch exposed wires:** Always assume wires are live until confirmed otherwise .
- **Avoid water:** Ensure the panel and surrounding area are dry to prevent electrical shock
