

How to turn off the power when wiring the distribution box

Article Overview

Always turn off the main power at the breaker or fuse panel and verify with a voltage tester before working on a distribution box.

Step-by-Step Guide

1. Locate the Main Power Source Identify your home's main breaker or fuse panel. This is usually found in a basement, garage, utility closet, or outside near the electric meter. For homes with a fuse box, locate the main fuses or cartridge fuses controlling the circuits you plan to work on . 2. Turn Off the Main Breaker or Remove Fuses

- For a breaker panel, flip the main breaker switch to the off position. Ensure it clicks into place. If individual circuits are being worked on, turn off the corresponding breakers first .
- For a fuse panel, completely remove the fuse controlling the circuit. Partially unscrewing a fuse is unsafe because it may still conduct electricity . For cartridge fuses, remove the cartridge or block entirely . 3. Verify Power is Off Use a non-contact voltage tester or multimeter to confirm that no electricity is present in the wires you will be working on. Test multiple points, as some circuits may be fed by more than one breaker . 4. Take Safety Precautions
- Wear insulated gloves, safety goggles, and non-conductive footwear .
- Keep the panel cover closed and, if possible, lock it or tape a warning sign to prevent others from accidentally turning the power back on .
- Unplug or turn off all appliances connected to the circuits to prevent damage fro...
